

Information for Students

The estimated beginning of the study will be the German winter semester (end of October), even if the course of lectures is not established yet, as long as you meet the following requirements:

- **Doctorate Requirements:** Your university degree has to be accepted by the University of Stuttgart. An application form can be found at http://www.uni-stuttgart.de/studieren/nachstudium/promotion/gleichwertigkeit/gleichwertigkeit_ssa.pdf.
- Parts of your thesis have to be written on site of the selected climatic zone. Therefore the support of the local university in your country is necessary. A detailed description of the support by the university is currently in the making.

As soon as you have your degree accepted, we will provide you further information about the course of lectures, flat hunting and matriculation.

Unfortunately we cannot provide any financial support. You have to bear all costs of your stay and the necessary travelling costs.

Information about sponsorships from the German government you can find at <http://www.daad.de/deutschland/foerderung/stipendiendatenbank/00462.en.html>

Please also have a look at

http://www.ia.uni-stuttgart.de/internat/groups/doctoral/docs/Phd_Infos.pdf

English will be the instruction language, although we recommend that you obtain some knowledge of the German language in advance.

We will try to provide you an advanced training in Stuttgart.

Enclosed you will find a brief description about the course of lectures. Each thesis will focus on the traditional building technique of a different climatic zone. Before starting your thesis you should pick a traditional building technique of your home country. A detailed description of the subjects and aims is currently developed.
